CERVICAL SCREENING *Awareness*

It's not a test for cancer, it's a test to help prevent cancer

During the screening appointment, a small sample of cells will be taken from your cervix

The sample is checked for certain types of human papillomavirus (HPV) that can cause changes to the cells of your cervix. These are called high risk types of HPV

If these types of HPV are found, the sample is checked for any changes in the cells of your cervix. These can be treated to help prevent cervical cancer

You'll be sent an invitation through the NHS App, by text or by letter when it's time to book your cervical screening appointment.
Your invitation will tell you where you can go for cervical screening and how to book.
