Lung Cancer Awareness

The main symptoms of lung cancer:

- a cough that does not go away after 3 weeks
- a long-standing cough that gets worse
- chest infections that keep coming back
- coughing up blood
- an ache or pain when breathing or coughing
- persistent breathlessness
- persistent tiredness or lack of energy
- loss of appetite or unexplained weight loss

Less common symptoms of lung cancer include:

- changes in the appearance of your fingers, such as becoming more curved or their ends becoming
- larger (this is known as finger clubbing)
- difficulty swallowing (dysphagia) or pain when swallowing
- wheezing
- a hoarse voice
- swelling of your face or neck
- persistent chest or shoulder pain

See a GP if you have any of the main symptoms of lung cancer or any of the less common symptoms.

Causes

Most cases of lung cancer are caused by smoking, although people who have never smoked can also develop the condition.

Smoking

Radon

Occupational exposure and pollution
